

# 2018 Patient Outcomes

We are extremely proud of the number of our patients who have increased their independence in our inpatient rehabilitation program. Changes in independence are measured using the Functional Independence Measure (FIM), which helps assess how well patients can manage daily tasks such as dressing, grooming and locomotion. Patients are measured when they arrive (admission) and throughout their stay in inpatient rehabilitation. By the time patients leave the rehab program (discharge), we expect an increase in FIM in the range of 25 to 35 points. Our overall target is 30. Of the 468 patients served here in 2018, the overall FIM gain attained was 35, which is above the expected overall target.

Patients who responded to our survey consistently rated our services at 95% for overall Patient Satisfaction. Our survey response rate is 58%.

Our greatest achievements are in preparing our patients to return home or to a community setting; 89% achieved this successfully!

<i>Outcome Performance Measure</i>	<i>Total Number of Patients</i>	<i>National Average</i>	<i>El Camino Health Acute Rehab</i>
<b>Patients Returning to a Community Living Setting</b>			
All Patients	468	79%	<b>89%</b>
Stroke Patients	143	76%	<b>83%</b>
Orthopedic	130	83%	<b>95%</b>
