

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	EL CAMINO HEALTH
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106430763
Report Period:	1/1/2024 - 12/31/2024
Status:	Final Review
Due Date:	11/29/2025
Last Updated:	01/28/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.elcaminohealth.org/about-us/health-equity

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

110415

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	93373	110415	84.6
Spanish Language	9801	110415	8.9
Asian Pacific Islander Languages	4593	110415	4.2
Middle Eastern Languages	666	110415	0.6
American Sign Language	38	110415	0
Other Languages	1944	110415	1.8

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1568

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

24876

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

NA

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	30	1.9	30	1.9
Housing Instability	32	2	32	2.0
Transportation Problems	38	2.4	38	2.4
Utility Difficulties	28	1.8	28	1.8
Interpersonal Safety	suppressed	suppressed	suppressed	suppressed

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

740

Total number of respondents to HCAHPS Question 19

757

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

97.8

Total number of people surveyed on HCAHPS Question 19

4944

Response rate, or the percentage of people who responded to HCAHPS Question 19

15.3

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native	suppressed	suppressed	suppressed	suppressed	suppressed
Asian	209	213	98.1		
Black or African American	12	13	92.3

Other/Unknown Languages	suppressed	suppressed	suppressed	suppressed	suppressed

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else					
Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

656

Total number of respondents to HCAHPS Question 17

721

Percentage of respondents who responded "yes" to HCAHPS Question 17

91

Total number of people surveyed on HCAHPS Question 17

4944

Response rate, or the percentage of people who responded to HCAHPS Question 17

14.5

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

45

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

704

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

63.9

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

66

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries
144.4

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1332

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

12369

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

10.8

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	15.6	18 to 34	3.2	4.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	13.9	18 to 34	3.2	4.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	18.6	Private	5.6	3.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	19	Asian	7.3	2.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	14.3	Private	5.6	2.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	15.2	Female	6.6	2.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	16.4	Female	7.8	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	6.2	18 to 34	3.2	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (Mental Health)	Sex Assigned at Birth	Male	19.9	Female	11.2	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	12.7	Asian	7.3	1.7

Plan to address disparities identified in the data

The top ten disparities in the report represent the populations of both the Mountain View and Los Gatos Hospital Campuses. All information in this report reflects data from the Los Gatos and Mountain View Hospitals combined except for the HCAHPS and CMQCC Measure Data.

Action Plan:

- Implement an age friendly dashboard report in the EMR that will assist in pulling together critical information to help care for our older adults within our 4m framework (what matters, medication, mentation, and mobility) by the end of calendar year 2025.
- Complete greater than or equal to 90% Social Work referrals for Social Determinants of Health (SDOH) prior to patient discharge to enhance care coordination, link patients to resources, and address barriers to health by the end of CY 2026.
- Implement the "Creating an Inclusive Workplace training for all employees." This training enhances cultural competency and supports equitable care experiences for patients across diverse racial, ethnic, gender, and age groups by April 2026.
- Modify the monthly summary template that is sent to our post-acute facilities to include language by the end of CY 2026, this will ensure that this element is visible to our post-acute care facilities to factor into their care and education.

In combination, we believe these initiatives will positively impact the populations identified as disparities by focusing on age friendly initiatives, culturally competent care, and SDOH consultations

with patients that screen positive on any of the five SDOH domains.

Noted Achievements to date:

- Implementation of Social Drivers of Health Screening in CY 2024
- Earned age friendly recognition for our Los Gatos Campus in CY 2025

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

At El Camino Health, person-centered care is at the heart of everything we do. We are dedicated to ensuring that the care and treatment provided is respectful and responsive to each patient's individual needs, preferences, and values. This commitment is reflected in our continuous focus on effective communication and patient engagement to provide culturally competent care. Our patient rights are posted throughout the hospital, including our registration areas and included in the inpatient handbook. This ensures patients are informed about their rights, promoting transparency, empowering them to make informed decisions about their care, and encourage them to be active participants in their care. By clearly outlining rights, hospitals foster trust, encourage open communication, and create a patient-centered environment that prioritizes safety and respect. We maintain a robust issue reporting tool that all staff have access to and can be easily accessed directly from the medical record system. In our issue reporting tool, staff document and capture concerns, including allegations of discrimination, allowing us to address concerns promptly and transparently. The tool allows us to track and trend feedback (issues) by site, unit and/or department. Patient complaints regarding allegations of discrimination are documented and categorized as REAL (Race, Ethnicity and Language) and/or socioeconomic factors, including but not limited to insurance and/or housing status. By capturing this data, we gain valuable insights into our patients' experiences, helping us identify any disparities in care, improve patient satisfaction, and ensure we are meeting the diverse needs of all our patients as part of our ongoing improvement efforts. Separately, El Camino Health regularly analyzes response rates on HCAHPS (Hospital Consumer Assessment of Healthcare Providers and Systems) surveys, stratifying results by demographic groups. This process helps ensure that survey respondents are representative of our diverse patient population and that we are truly hearing from and integrating our patients' voices into our care delivery. By reviewing this feedback, we identify the services our patients value most and pinpoint areas for opportunity and improvement. Recognizing the importance of clear communication, we provide medically certified interpreters for patients who require interpretation services. In-person interpreters are available upon request, and virtual interpreter services are always accessible, ensuring that language is never a barrier to understanding care options or making informed decisions. We strive to create a welcoming and inclusive environment for every patient. Our Patient Experience team is dedicated to supporting patients and families, addressing concerns, and facilitating communication between patients and care teams. Additionally, we offer a variety of support services, including spiritual care and social work to help meet the unique needs of each individual. Through these initiatives, El Camino Health demonstrates its unwavering commitment to

patient-centered care, ensuring that every patient receives care that is respectful, responsive, and tailored to their individual needs and values.

Patient safety

Patient safety is a top priority at our hospital, and we are committed to preventing harm to patients during their stay by proactively addressing infections. Our infection control team provides ongoing training for staff on infection prevention and control standards, ensuring that best practices are consistently followed to prevent the spread of healthcare-associated infections (HAIs). To empower patients, all individuals admitted to our facility receive a booklet containing patient education handouts on HAI prevention. This resource helps patients understand their role in infection prevention and encourages active participation in their care. We promote a culture of safety throughout our organization, encouraging staff to speak up about concerns and continuously improve safety practices. Our approach to infection prevention is data-driven, we stratify HAI rates by various demographic data elements to identify potential disparities and target interventions more effectively. Each year, we set specific goals for HAI reduction and monitor our progress monthly. Furthermore, our infection prevention strategies are grounded in evidence-based bundles, which are proven sets of interventions designed to reduce infection risk. Through these comprehensive and collaborative efforts, we remain steadfast in our mission to provide the safest possible environment for our patients. By continually evaluating and enhancing our infection prevention strategies, we strive not only to meet but to exceed national standards, ensuring that every patient receives high-quality, safe care during their hospital stay.

Addressing patient social drivers of health

We implemented a standardized SDOH screening process for all patients over the age of 18 upon admission, encompassing all five key domains of social drivers of health. We screen for financial instability, food insecurity, housing instability, transportation needs, and interpersonal safety. This initiative enables us to systematically collect and utilize critical demographic data including factors such as race, ethnicity, and language to better understand and address health disparities within our patient population. Respect for patient autonomy is central to our approach. Following the initial SDOH screening, social worker follow-up is provided for patients who request support and linkage to community resources, ensuring that the care plan is tailored to individual preferences and needs. Importantly, any patient who screens positive for social needs is provided with a list of community resources specifically selected to address their identified needs. Beyond social work support, our outpatient care navigator also assists patients with linkage to community resources, leveraging relationships with numerous grant-funded community partners. Our collaborative and supportive relationships with these community organizations are foundational to our efforts. Through ongoing partnership and feedback, we continuously refine and improve our processes, striving to more effectively identify and address the evolving needs of our patients. By integrating SDOH data into our care delivery, we are committed to reducing health disparities and promoting equitable health outcomes for all those we serve.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

At El Camino Health, we are committed to delivering evidence-based, high-quality care that results in positive health outcomes for every patient, regardless of their background. Our dedication to continuous improvement is reflected in our close monitoring of key indicators such as length of stay (LOS), readmission, and other quality metrics, which help us drive effective treatment and care. Our Integrated Care Team collaborates closely with aligned providers to ensure patients achieve

optimal health outcomes throughout the entire continuum of care. We have established a specific workflow to identify patients at risk for readmission upon discharge. This process includes partnering with the inpatient case management team, following up with patients to ensure they see a primary care provider (PCP) within seven days of discharge, coordinating with a transitional pharmacist for medication management, and referring patients to the appropriate level of care based on their individual needs. Additionally, our Integrated Care Team leads, facilitates, and coordinates educational sessions to ensure post-acute facilities are equipped to provide the high-quality care necessary to meet the diverse needs of our population.

Care coordination

Our Integrated Care Team (ICT) works collaboratively with a wide range of disciplines across El Camino Health, with a particularly close partnership with our Care Coordination Team. The Care Coordination Team serves as a vital link among physicians, nurses, social workers, and pharmacists, ensuring that every patient receives timely, comprehensive care tailored to their individual needs. Thanks to a generous grant from the El Camino Health Foundation, we are able to offer our "Connected Home Living" service, which provides patients who require additional support with remote monitoring and care in the comfort of their own homes. Through this innovative program, the care team can continuously track patients' vital signs and intervene promptly when medical needs arise, further enhancing patient safety and well-being.

Access to care

El Camino Health is committed to ensuring that all individuals, regardless of background or circumstance, have equitable access to our hospital services. We recognize that access to care encompasses a variety of factors, including financial, linguistic, and geographic considerations. To address financial barriers, El Camino Health provides dedicated financial counselors who work closely with patients and their families. These counselors assist with understanding insurance coverage and navigating payment options, ensuring that cost does not prevent anyone from receiving necessary care. Recognizing the diverse linguistic needs of our community, El Camino Health offers comprehensive interpretation services. These services are available for patients and families who prefer to communicate in languages other than English, ensuring that everyone can fully understand their care options and participate in healthcare decisions. Additionally, El Camino Health is proud to offer an inpatient psychiatric unit, providing specialized mental health care for those in need. This unit ensures that patients experiencing acute psychiatric conditions have timely access to comprehensive treatment and support within our hospital. To further support our community's urgent healthcare needs, El Camino Health operates two emergency rooms that are open 24 hours a day, seven days a week. These facilities ensure that individuals have round-the-clock access to emergency medical care, regardless of the time or circumstance. Through these initiatives, El Camino Health demonstrates its ongoing commitment to removing barriers and promoting equitable access to high-quality healthcare for our community.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
